

AIM USB 471.exe package installation

This package is to be installed just in case the user wish to use an AIM logger USB communication with the old code

VID = Vendor Identification = 0471.

That code was in use until December 2003, when AIM was assigned its own ID:

AIM VID = 11CC

Currently, just few AIM loggers are still identified with the old VID 0471 code: EVO3, MYCHRON3 and the first MXL production batch.

To use these loggers with WINDOWS VISTA and WINDOWS7 it is necessary to:

- install the above package, and run it with “Run as administrator” procedure.
- install the latest Race studio release, which is compatible with both codes, the old VID=0471 as well as the official AIM code VID=11CC.

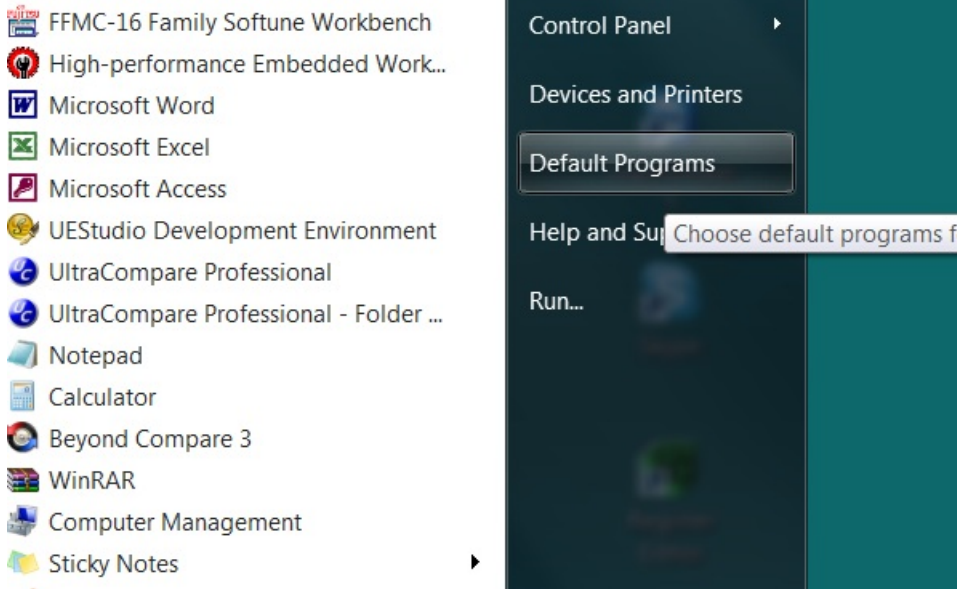

Installation procedure is the same as for the code 11CC, with this icon:

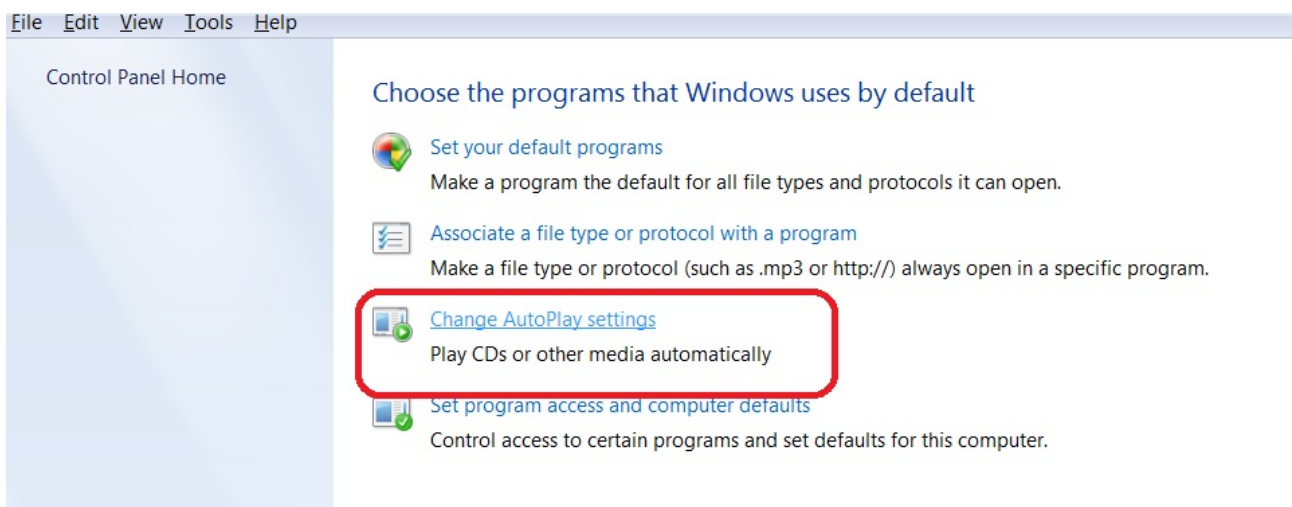

See AIM USB installation manual in www.aim-sportline.com >>Download>>Software area

Many PCs establish a direct connection between VID = 471 and Creative Jukebox. In order to avoid that connection – which would start Creative Jukebox any time the user inserts a USB device with code VID=471 – please follow these steps:

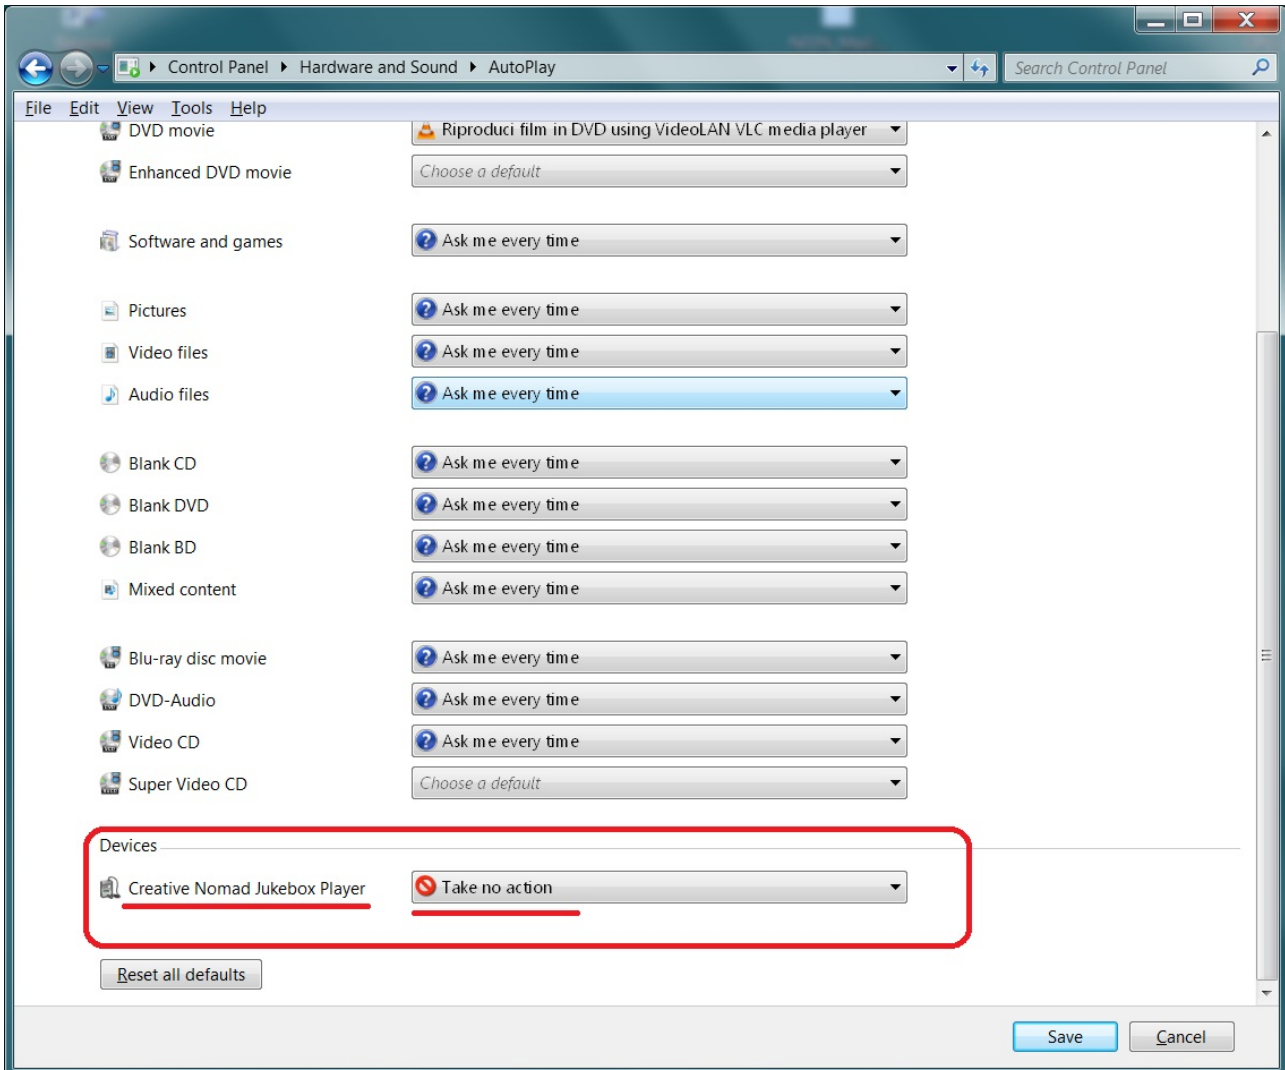

CLICK on START PROGRAMS

Default Programs

Disabile automatic starting.
